CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprot CATALYTIC ACTIVITY: Widely expressed. No expression in cc TISSUE SPECIFICITY: Widely expressed in human hepatoma thymus, and small intestine. Expressed in human hepatoma lines but not in normal liver tissues.

SIMILARITY: Belongs to the Ser/Thr protein kinase family
                                                                                                                                                                                                                               s Swiss-Prot entry is copyright. It is produced through a cween the Swiss Institute of Bioinformatics and the EMBL European Bioinformatics Institute. There are no restrict

"Generation and initial analysis of more than 15,000 full-length hand mouse cDNA sequences.";
Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-I- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-I- SIMILARITY: Belongs to the Ser/Thr protein kinase family. PIM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ProDom, PD000001; Prot_kinase; 1.

"KID-1, a protein kinase induced by depolarization in brain.";
"KID-1, a protein kinase induced by depolarization in brain.";
J. Biol. Chem. 273:16535-16543 (1998).

-i- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-i- TISSUE SPECIFICITY: Present in a number of unstimulated tissu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Rattus norvegicus (Rat);

Submitted (AUG-2004) to the EMBL/GenBank/DDBJ databases.

-i- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.

-i- SIMILARITY: Belongs to the Ser/Thr protein kinase family.

EMBL; BC081340; AAH81340.1; -; mRNA.

Sequence 7, Application US/09237543A
Patent No. 6143540
GENERAL INFORMATION:
APPLICANT: Kapeller, Rosana
TITLE OF INVENTION: NOVEL MOLECULES OF THE HK
TITLE OF INVENTION: AND USES THEREOF
FILE REFERENCE: 03500/175631
CURRENT APPLICATION NUMBER: US/09/237,543A
CURRENT FILING DATE: 1999-01-26
NUMBER OF SEQ ID NOS: 11
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 7
LENGTH: 313
TYPE: PRT
ORGANISM: Mus musculus
US-09-237-543-7

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Patent No. 5882894
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Smith, K. A., & Beadling, C.
TITLE OF INVENTION: Nucleic Acids Encoding CR8 Polypeptide, Vector and
TITLE OF INVENTION: Transformed Cell Thereof, and Expression Thereof
NUMBER OF SEQUENCES: 35
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

US-09-971-791-7

Sequence 7, Application US/09971791

Patent No. US30020115120A1

GENERAL INFORMATION:
APPLICANT: Rosamna Kapeller-Libermann
APPLICANT: Laura A. Rudolph-Owen

APPLICANT: Kyle MacBeth

TITLE OF INVENTION: NOVEL MOLECULES OF THE HKI
FILE REFERENCE: 35800/238856

CURRENT APPLICATION NUMBER: US/09/971,791

CURRENT FILING DATE: 2001-10-04
PRIOR APPLICATION NUMBER: 09/644,450
PRIOR APPLICATION NUMBER: 09/644,450
PRIOR APPLICATION NUMBER: 09/637,543
PRIOR FILING DATE: 1999-01-26

NUMBER OF SEQ ID NOS: 11

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 7

LENGTM: 13
